

Mobile Folding Concertina Room Dividers Planning Sheet

We have created this guide to assist you in working out the number of systems and panel configurations required to cover specific floor spaces

Using a “zig zag” configuration we recommend that two panels = 1m

Please note for safety reasons Mobile Concertina Screens cannot be used flat and must be angled for stability purposes

Sample measurements using the configuration described above:

Panel Configuration	Area Covered	Panel Configuration	Area Covered
9 Panel	4.5 m	5 Panel	2.5 m
7 Panel	3.5 m	4 Panel	2.0 m

Please note Concertina Room Dividers are flexible and the above information has been created to assist you when ordering your goods. Once you have the units on site, you will be able to adjust your angles to suit your own requirements.
